EPDM Flooring: A Durable & Safe Surface Solution

# Type of EPDM Flooring

1. Wet Pour EPDM Flooring
2. EPDM Playground Flooring
3. EPDM Rubber Tiles
4. EPDM Interlocking Tiles
5. EPDM Sheet Flooring
6. EPDM Running Track Flooring

# 1. Wet Pour EPDM Flooring

**Wet Pour EPDM Flooring** is a seamless, impact-absorbing surface made by mixing EPDM rubber granules with a polyurethane binder and pouring it on-site. It is widely used in playgrounds, sports courts, running tracks, and recreational areas due to its durability, slip resistance, and cushioning effect. This flooring provides excellent shock absorption, reducing the risk of injuries, and is available in various colors and designs for customization. It is weather-resistant, low-maintenance, and ideal for both indoor and outdoor applications.

## 2. EPDM Playground Flooring

**EPDM Playground Flooring** is a soft, impact-absorbing surface designed to enhance safety in children's play areas. Made from EPDM rubber granules and a polyurethane binder, this seamless flooring reduces the risk of injuries from falls, making it ideal for playgrounds, parks, and recreational spaces. It is weather-resistant, UV-stable, and available in a variety of colors and patterns, allowing for creative designs. EPDM playground flooring is durable, slip-resistant, and low-maintenance, providing a long-lasting and safe environment for children.

⇒ Outdoor gym area

# Children play area

**Children's Play Area Flooring** made from EPDM rubber provides a safe, cushioned, and durable surface for kids to play on. This impact-absorbing flooring minimizes the risk of injuries from falls, making it ideal for playgrounds, schools, and daycare centers. The seamless, non-toxic material is weather-resistant, slip-proof, and available in various bright colors and fun designs to create an engaging and visually appealing play environment. Easy to maintain and long-lasting, EPDM flooring ensures a safe and comfortable space for children to enjoy outdoor and indoor activities.

# Outdoor gym area

**Outdoor Gym Area Flooring** made from EPDM rubber offers a durable, shock-absorbing, and slip-resistant surface designed for high-impact workouts. It provides excellent cushioning to reduce stress on joints, making it ideal for outdoor fitness parks, calisthenics areas, and gym zones. The weather-resistant and UV-stable properties ensure long-lasting performance in outdoor conditions. Available in various thicknesses and colors, EPDM flooring enhances safety, comfort, and aesthetics while being easy to maintain. Its non-slip surface provides stability, making workouts safer and more efficient.

## 3. EPDM Rubber Tiles

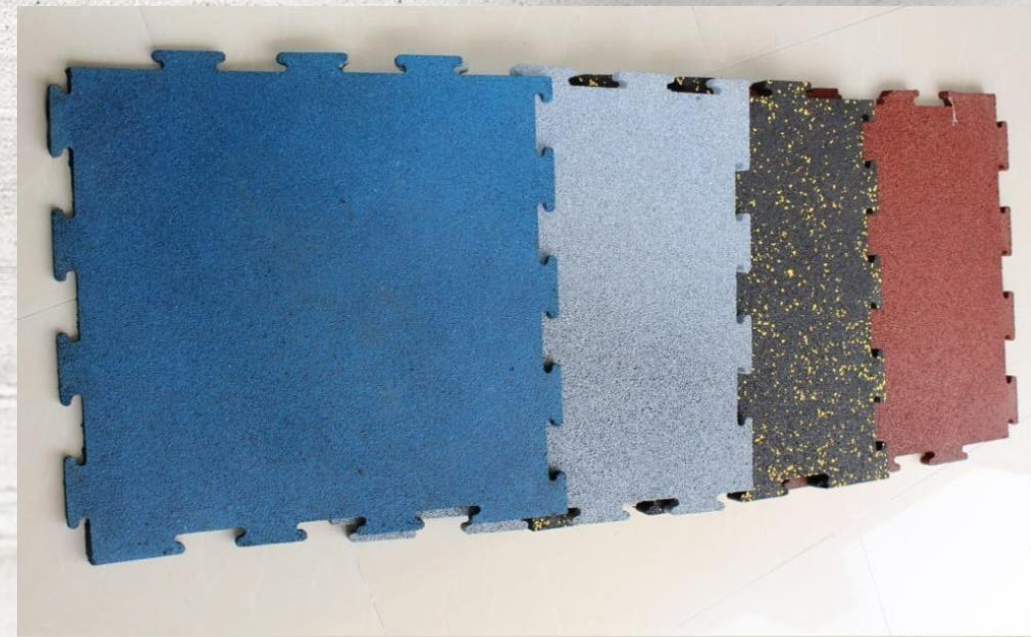

**EPDM Rubber Tiles** are prefabricated, high-density rubber flooring solutions designed for easy installation and durability. These tiles provide excellent shock absorption, slip resistance, and cushioning, making them ideal for gyms, playgrounds, sports areas, and commercial spaces. They come in various thicknesses, colors, and designs, allowing for customization based on safety and aesthetic requirements. EPDM rubber tiles are weather-resistant, low-maintenance, and offer a modular design that enables quick replacement of individual tiles if needed.

## 4. EPDM Interlocking Tiles

**EPDM Interlocking Tiles** are modular, easy-to-install rubber flooring solutions that fit together like puzzle pieces without the need for adhesives. These tiles provide excellent shock absorption, slip resistance, and durability, making them ideal for gyms, playgrounds, fitness centers, and commercial spaces. Their interlocking design allows for quick installation and easy replacement of damaged sections. Available in various thicknesses and colors, EPDM interlocking tiles offer a cost-effective and customizable flooring option that enhances safety and comfort.

## 5. EPDM Sheet Flooring

**EPDM Sheet Flooring** is a flexible, roll-based rubber flooring solution that provides a seamless and uniform surface. It is highly durable, water-resistant, and offers excellent slip resistance, making it ideal for gyms, industrial areas, commercial spaces, and wet environments. EPDM sheets are easy to install, low-maintenance, and resistant to extreme weather conditions, UV rays, and chemicals. Available in various thicknesses and colors, this flooring option ensures safety, comfort, and longevity in both indoor and outdoor applications.

## 6. EPDM Running Track Flooring

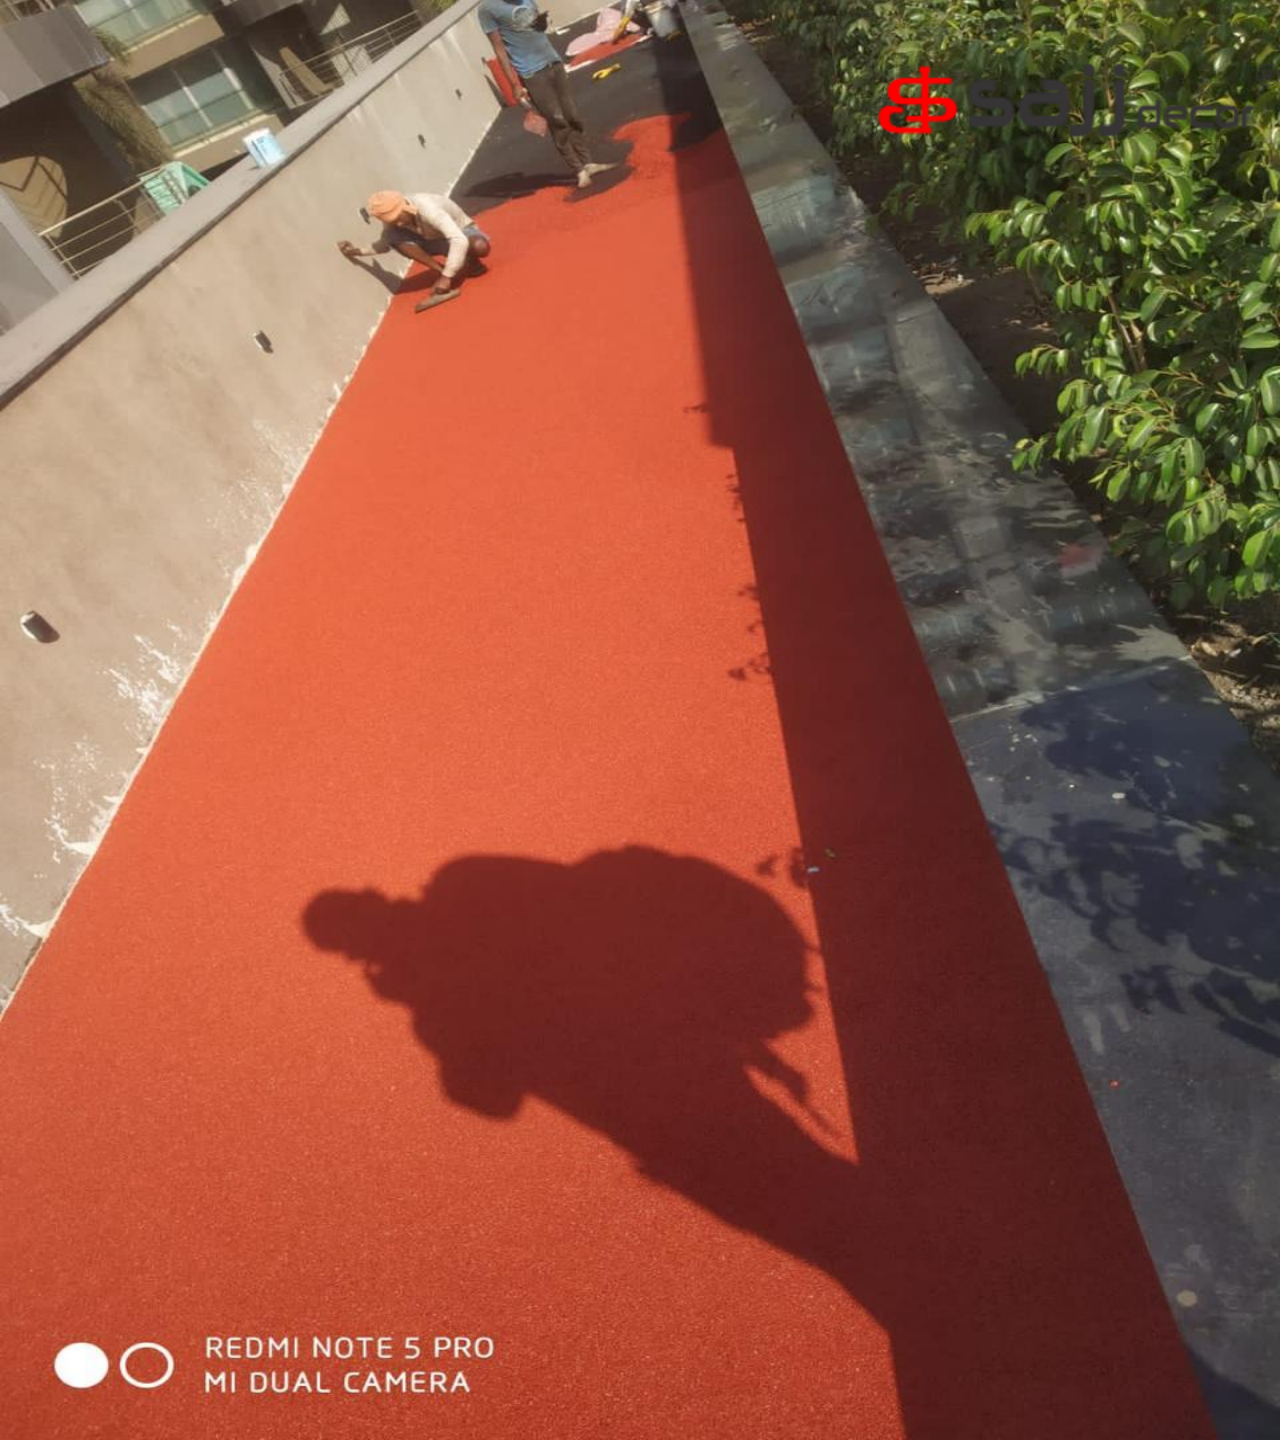

**EPDM Running Track Flooring** is a high-performance, shock-absorbing surface designed for athletic tracks, jogging paths, and sports facilities. Made from EPDM rubber granules mixed with a polyurethane binder, this flooring provides excellent grip, durability, and weather resistance. It enhances athletes' performance by reducing impact stress on joints and muscles while ensuring slip resistance in all weather conditions. Available in various thicknesses and colors, EPDM running track flooring is a long-lasting, low-maintenance solution that meets international sports standards.
